The screenshot shows a Facebook page for 'Anammox'. There are two separate quizzes displayed side-by-side.

**Quiz 1:** What is an important intermediate in the anammox reaction?

- Hydrazine
- Nitrite oxide
- Hydroxylamine

Next question: Vind & kies / Beantwoord / Deelnemers

**Quiz 2:** Which product do anammox bacteria make?

- Nitrogen gas
- Nitrate
- Ammonium

Next question: Vind & kies / Beantwoord / Deelnemers

At the bottom right, there is a logo for Radboud University Nijmegen.

## INTRODUCTION@MICROBIOLOGY

[m.socrative.com](http://m.socrative.com) student class # 286260

### HOE GROOT ZIJN MICROBEN?

A screenshot of a Socrative poll titled 'HOE GROOT ZIJN MICROBEN?'. The poll asks: 'Question: how big are microbes?'.

**Answers:**

- Answer 1: 1 nanometer
- Answer 2: 1 micrometer
- Answer 3: 1 millimeter
- Answer 4: 1 meter
- Answer 5: 1 kilometer

On the right, there is a list of options for 'vragen voor nibi 12 januari hoe groot zijn microben?':

- 1 nanometer
- 1 micrometer
- 1 millimeter
- 1 centimeter
- 1 meter
- 1 kilometer

At the bottom right, there is a logo for Radboud University Nijmegen.

### WELK DEEL VAN DE BIOMASSA OP AARDE IS MICROBIEEL?

The image shows two side-by-side screenshots. On the left is a Socrative poll interface with the question: "Question: which part of the biomass on earth is microbial?". It lists five answer options: Answer 1: 1%, Answer 2: 10%, Answer 3: 50%, Answer 4: 99%, and Answer 5: Optional. On the right is a Facebook poll interface with the same question and the same five answer options. Below the Facebook poll are the results: 2%, 20%, 30%, 39%, and 9%.

Answer	Socrative (%)	Facebook (%)
Answer 1: 1%	1%	2%
Answer 2: 10%	10%	20%
Answer 3: 50%	50%	30%
Answer 4: 99%	99%	39%
Answer 5: Optional	Optional	9%

### HOELANG ZIJN ER AL MICROBEN OP AARDE?

The image shows two side-by-side screenshots. On the left is a Socrative poll interface with the question: "Question: How long ago did the first microbes appear on earth?". It lists five answer options: Answer 1: 4 Giga years ago, Answer 2: 2 Gy ago, Answer 3: 1 Gy ago, Answer 4: 100 My, and Answer 5: 1000 years ago. On the right is a Facebook poll interface with the same question and the same five answer options. Below the Facebook poll are the results: 0%, 20%, 100%, 100%, and 100%.

Answer	Socrative (%)	Facebook (%)
Answer 1: 4 Giga years ago	0%	0%
Answer 2: 2 Gy ago	20%	20%
Answer 3: 1 Gy ago	100%	100%
Answer 4: 100 My	100%	100%
Answer 5: 1000 years ago	100%	100%

## INTRODUCTION@MICROBIOLOGY

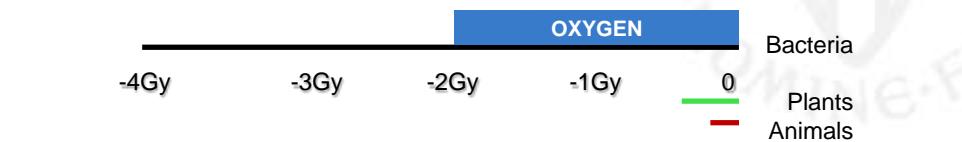

### Microbial Planet

**Small in size:** 100 nm – 2 mm

**Large in numbers:** 10<sup>30</sup> microbial cells on Earth  
(50% of biomass)

"The Earth is a **microbial** planet, on which macro-organisms are recent additions, highly interesting and extremely complex, but in the final analysis relatively unimportant in a global context."

Wheelis et al. (1998) PNAS 95:11043-11046

## HOW TO DISCOVER THESE “IMPOSSIBLE” MICROBES?

- Survey of selected ecosystems
- Bring Best Samples to Lab
- Design optimal bioreactors
- Enrichment under optimal conditions
- Grow enough cells
- Use of the molecular toolbox
- Back to the ecosystem
- Application of the new microbes

## WHAT DO YOU NEED TO DISCOVER THE “IMPOSSIBLE”?

- Adequate National and EU funding
- International Academic and Industrial Collaboration
- State of the Art Microbial Methods
- Skilled and Enthusiastic Team Members

## METHYLOMIRABILIS OXYFERA

### Unique Twente Canal Bacteria

Wat is het geheim van *M oxyfera* bacterien?

The screenshot shows a Moodle-based online quiz interface. The question is: "Select the square checks to mark correct answers (optional). Question: what is so miraculous of *M. oxyfera*?" Below the question are five answer options:

- Answer 1: It can oxidize methane
- Answer 2: It uses nitrite
- Answer 3: It can make oxygen from NO
- Answer 4: It was assumed to be impossible for a long time
- Answer 5: ...

On the right side of the interface, there is a sidebar with the title "Administratie" and a link "Administratie (40 punten), via Facebook". Below this, there is another section titled "Vraag 7 niet is het gelukt om de correcte antwoorden te vinden" with four radio button options:

- De bacterie verbruikt zuurstof
- De bacterie gebruikt
- De bacterie kan niet NO
- De bacterie leeft voor een compatibele pH-waarde

At the bottom of the sidebar, there is a link "Vraag 8 Aanpassen" and a "Sluiten" button.

### Two kinds of lithotrophs missing in nature

E. BRODA

(*Biographies on J.L. S. 1976*)

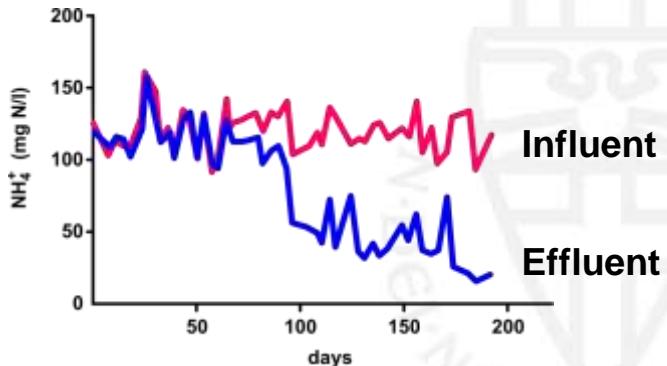

Two groups of lithotrophic bacteria, the existence of which may be expected on evolutionary and thermodynamical grounds, have not yet been detected: (A) phototrophic, anerobic, ammonia bacteria, analogous to oxidized sulphur bacteria, and (B) chemoautotrophic bacteria with organic substrates in their energy metabolism (PHOTOCHEM and SURE, 1969); all autotrophs must be lithotrophs, though the reverse need not be true. The two bacteria here predicted would generate dinitrogen ( $\text{N}_2$ ).

The versatility of the prokaryotes in their energy metabolism has long astonished microbiologists. The bacteria have developed processes, i.e., enzymes, for the utilization of a wide range indeed of exogenous reactions. Attention is now drawn to further processes in energy metabolism which on the basis of considerations on the evolution of the biotrophic processes (BRODA, 1975a) may be expected to have existed, or to exist, but which have not yet been found. Two kinds of "lithotrophic" bacteria with such mechanisms will now be predicted. Lithotrophs are bacteria that use inorganic substrates in their energy metabolism (PHOTOCHEM and SURE, 1969); all autotrophs must be lithotrophs, though the reverse need not be true. The two bacteria here predicted would generate dinitrogen ( $\text{N}_2$ ).

The nitrifying bacteria make adenosine triphosphate, ATP, through oxidative phosphorylation coupled to the aerobic oxidation of ammonia, a highly exergonic process. Thus, in nitrification *Nitrosomonas* produces nitrite, and *Nitrobacter* makes nitrate. The redox reactions are:
